

Cloud Videoconferencing Service

RICOH Unified Communication System Advanced Service

RICOH
imagine. change.

Meet and share information from anywhere

Use the RICOH® Unified Communication System (UCS) Advanced Service to communicate with ease wherever you please. With this intuitive cloud-based service, you can create your own videoconference in moments from almost any device, on any network, from any location. Eliminate expensive infrastructure, utilities and dedicated software — and avoid frustrating delays and hassles. See reactions in real-time. Share spreadsheets and presentations on screen. And collaborate with more people in more places. Simply add the service to your business environment to schedule, launch or join a videoconference via any device anywhere and make your next meeting more personal and every message more compelling.

- Use the subscription-based, scalable service to reduce investment costs
- Pair with any standards-based videoconferencing system
- Create, join and manage meetings from any web-enabled device
- Minimize IT resource involvement

Create your own virtual meeting room

Schedule your next face-to-face meeting with only a few clicks. Invite participants to join you in a virtual meeting room in the cloud, whether they join you from a PC, tablet, browser or video system. There's no need for complicated planning or infrastructure. Hold a video meeting with as many as 30 participants who can see and hear each other — and share documents, presentations, images and more. Since it's a virtual meeting room, it's always open. There's no need to pre-book. Use it for ad-hoc calls between three or more participants, weekly team meetings, HR recruitment or customer engagements. You'll have a unique video address, which is formatted like an email address, so it's easy to remember and share with your contacts.

With any-to-any connectivity, the virtual meeting room can be accessed from any standards-based video device. If it's more convenient to join by phone, use dial-in numbers from 62 countries to save on international call costs. You can call from multiple soft clients such as Skype for Business, Polycom Real Presence, or Cisco Jabber Movi with full presentation sharing. RICOH UCS Advanced Service also supports Web-RTC calls and all major browsers.

Stay connected on the go

Turn your iPad® or Android® tablet into a powerful videoconferencing device, allowing you to connect securely in high quality audio and video with your colleagues and business partners across the globe. Stay connected whether you are on the road, at a hotel or enjoying a morning brew at your favorite coffee shop. Experience point-to-point calling with one of your contacts, or host a team meeting in your personal conference room where participants can join from any standards-based video system like Polycom® or Cisco®, from Microsoft Skype® for Business (Lync®), or even from a web browser or phone.

Manage your next meeting with ease

Enjoy centralized management to simplify audio and videoconferences. Access real-time and historical usage information. Use drag-and-drop functionality for bulk subscriber uploads. Offer remote control for other users in virtual meeting rooms. Manage ongoing meetings. Schedule them directly in Microsoft® Outlook to make it even easier. Call details and dial-in information are automatically entered into the Outlook calendar via plug-in of every participant. You can also set guest/host access control for additional security.

Note: calls can be password protected.

Connect all your conferencing solutions in one call using any device, any network, anywhere. RICOH Unified Communication System Advanced Service brings them all together.
